

ABSTRACT OF THE DISCLOSURE

The present invention relates to an insulation component for thermal and/or sound insulation, particularly for motor vehicles, which is at least partially provided with a fire-retardant coating (3). To achieve a high refractoriness, a good insulation effect, and favorable manufacturing costs, a fire-retardant coating (3) is suggested for the insulation component which is composed of at least the following components:

40 to 90 wt. %	of a ceramic adhesive,
5 to 50 wt. %	ceramic micro hollow spheres having a grain size in the range from 0.1 to 3 mm
0.1 to 10 wt. %	of a propellant which expands under the effect of heat.
